SECTION 11 - TOXICOLOGICAL INFORMATION

Searches of the National Library of Medicine's Toxicological databases and information from other sources provided no data to indicate that any of the ingredients at levels found in this glue would be expected to cause acute or chronic toxic effects or be corrosive or irritating to the skin or to the eyes of consumers who may be exposed as described above.

None of the ingredients in this glue have been designated "Strong Sensitizers" by the Consumer Product Safety Commission (CPSC).

The potential risk from a chemical substance to an individual is a function of both the exposure to and the toxicity of that chemical. Since none of the ingredients in this glue would be expected to cause significant acute or chronic toxic effects via dermal contact, inhalation or oral ingestion or be corrosive or irritating to the skin or the eyes, it is reasonable to conclude that these types of health risks from exposures to them are toxicologically insignificant. Although none of the ingredients in this glue have been designated "Strong Sensitizers" by the CPSC, a remote possibility exists that a few individuals in the general population who are allergic to one or more of the ingredients in them, may exhibit a sensitization reaction on exposure. Such an event, while expected to be a rare one, cannot be absolutely ruled out. In addition, none of the ingredients at the levels found in this glue are banned or restricted for use in consumer products in the US or Canada under the regulations cited above. Thus, based on a review of all the available information provided to date and if the assumptions mentioned above are correct, it is suggested that this Acrylic paint product would be expected to be safe when used as intended under circumstances involving reasonable foreseeable misuse.
